

Cleaning Technology That Keeps Your Business Operating Safely and Optimally

Maintaining operations while adhering to recommended safety protocols to combat the spread of COVID-19 could present a formidable challenge for your business. ServiceMaster by Demarrt has the most cost-effective and advanced cleaning technology options available to keep your staff and clients safe while minimizing the amount of time your doors are closed and operations are halted.

Faster, More Powerful and More Cost-Effective Disinfectant Options

Other cleaning services use traditional methods such as wiping with cloths or using pump sprayers that require teams of workers to come into your business for extended periods of time.

ServiceMaster by Demarrt uses electrostatic sprayers and ULV fogging machines to cover more area, more effectively, and in a shorter amount of time. Both methods allow our team to disinfect thousands of square feet per hour – which means you and your team can return to work quickly. And they're proven to be more effective in killing viruses than traditional methods used by our competitors.

About Our Technology

Our electrostatic sprayer and ULV Fogging process allow us to quickly and evenly coat surfaces with a disinfectant that kills 99.9% bacteria and viruses.

Let's Get Started

The ServiceMaster by Demarrt team is trained, certified, and ready to implement the best cleaning service for your business or facility—at times that are most convenient for you. Let us help you meet cleaning frequency requirements so can do what you do best: run your business safely.
